1,000,000 Manhours of Safety . . .

PLANT 6 REACHES COVETED SAFETY GOAL

An outstanding safety record is being established hourly by the men of Plant 6.* As of May 31, 1960, these men have worked 1,099,182 consecutive manhours without incurring a lost time injury. The last major accident suffered by this group occurred on January 11, 1959.

Members of management of National Lead Com-

pany of Ohio and the officers of the Fernald AFL-CIO Atomic Trades and Labor Council join in extending sincere congratulations to each man contributing to this impressive safety record.

** Although no lost time injury has been recorded in any area of the Plant during this period, this record includes only those hours worked by men assigned to the Production Division: either in the Rolling Mill or the Machining area.*
