

# Plant 6, Metals Fabrication Plant

### Mission:

Used for major uranium metal fabrication processes including: rolling, machining, heat treating, pickling, briquetting, and final inspection and packaging of all uranium metal products.

### Interesting Fact:

The Rolling Mill inside Plant 6 used technology, equipment and workers from the steel industry, but was eventually replaced by an extrusion process in 1971.

### Demolition Completion:

**Dec. 2001**

### Safe Shutdown:

More than 205,000 pounds of holdup material were removed prior to demolition.

### Demolition Insight:

Work crews used air-powered chisels and jackhammers to remove nearly 82 tons of uranium-contaminated salt from three heat-treating furnaces during safe shutdown activities.
