

Plant 7, Reduction Plant

Demolition Insight:

Plant 7 was the tallest of the 10 plants on the Fernald skyline and was the first of three plants to be imploded. Built to withstand a bomb blast, it took two separate implosions to bring the plant to the ground.

Mission:

Used to convert uranium hexafluoride (UF_6) to uranium tetrafluoride (UF_4) in the early years of production.

Demolition Completion:

Sept. 1994

Interesting Fact:

Plant 7 only operated from 1954-56 when it was used to supplement the production of "green salt" from Plant 4.
