

Plant 8, Scrap Recovery Plant

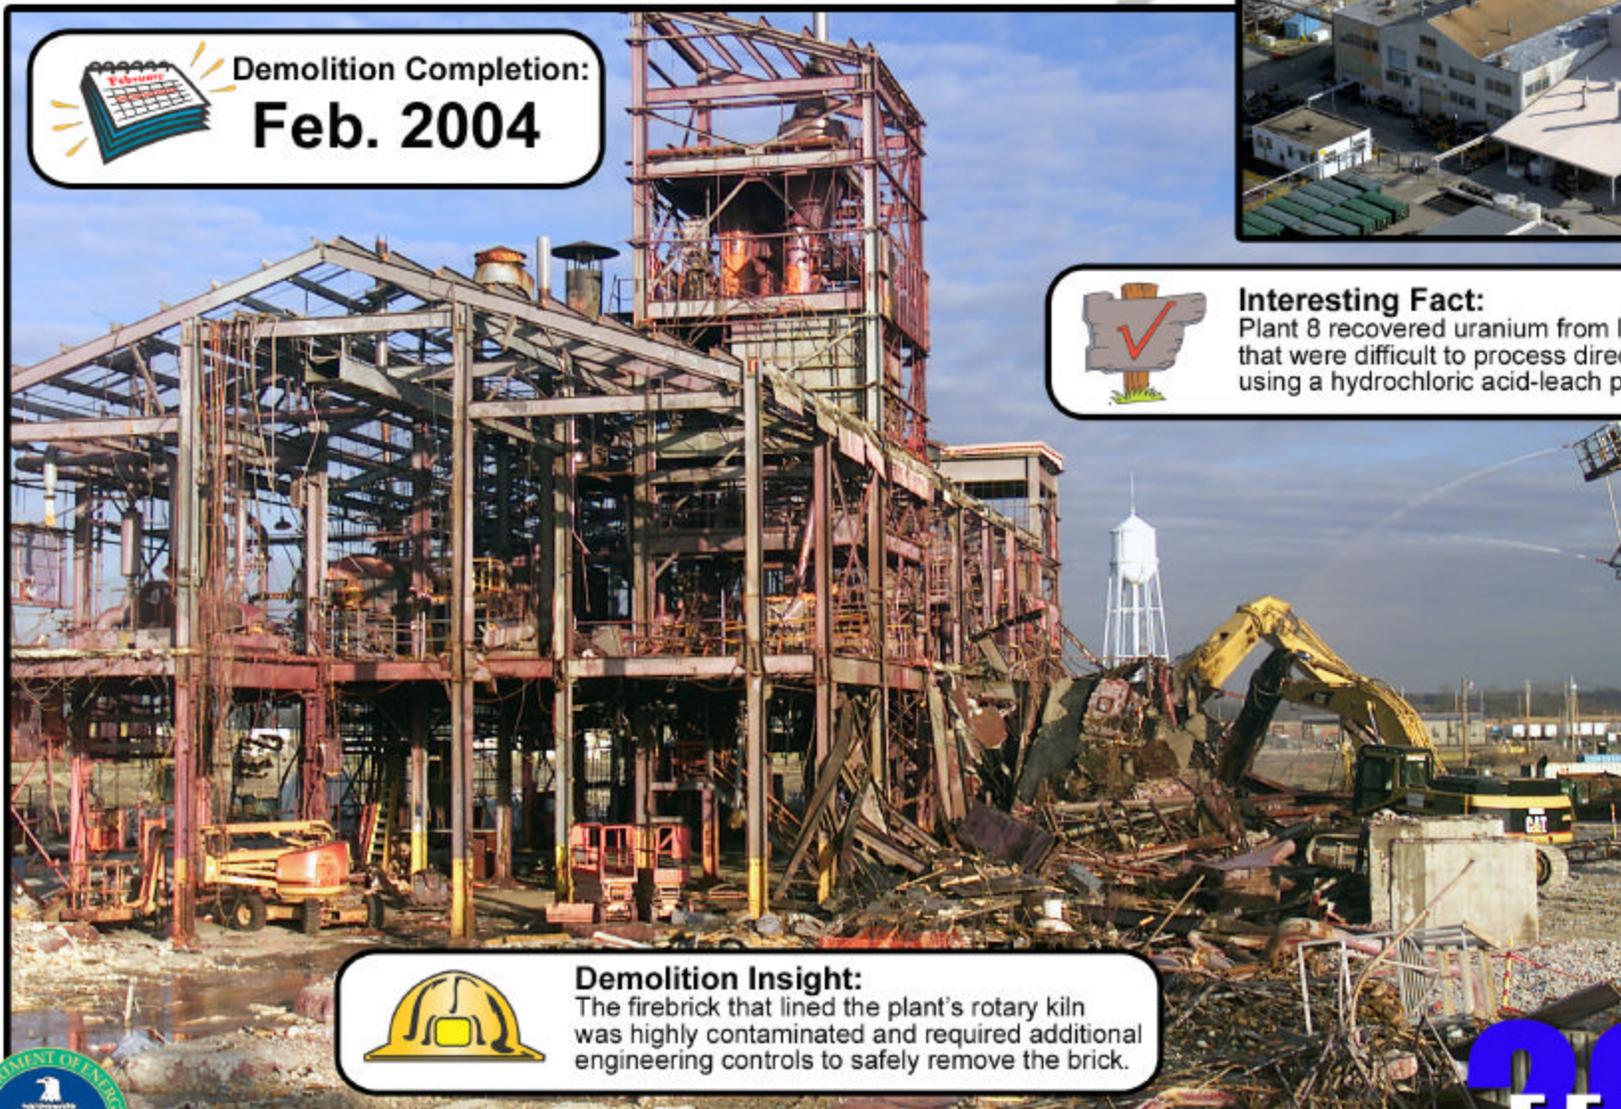

Mission:

Used to screen recycled materials, dry uranium-containing residues and filter contaminated water for recovery and waste operations.

Demolition Completion:

Feb. 2004

Interesting Fact:

Plant 8 recovered uranium from low-grade residues that were difficult to process directly in Plant 2 by using a hydrochloric acid-leach process.

Demolition Insight:

The firebrick that lined the plant's rotary kiln was highly contaminated and required additional engineering controls to safely remove the brick.
